

# QUIZ 7 – Report

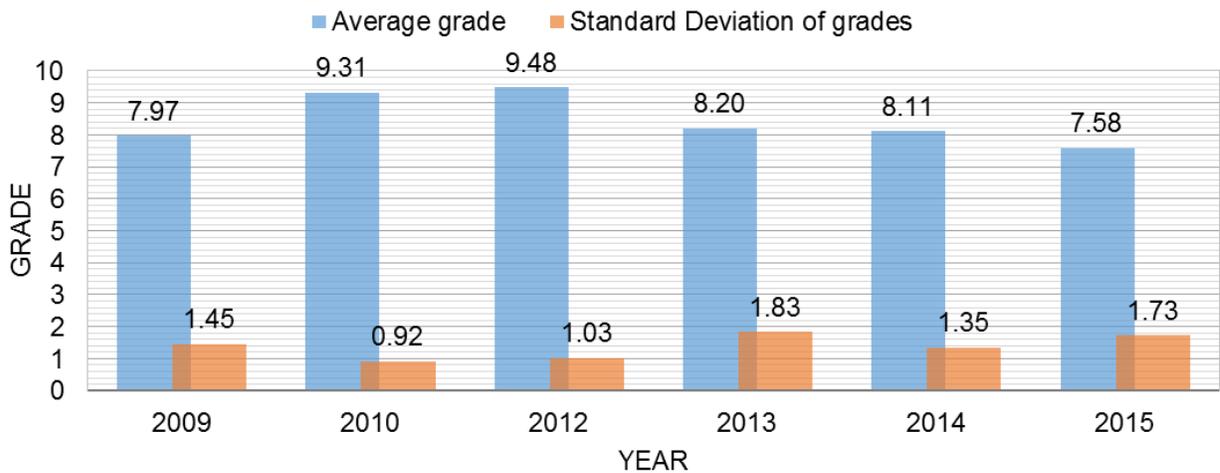

## General

Total number of students	42
Attended	40
Missed	2
Average grade	7.58
Standard deviation of grades	1.73

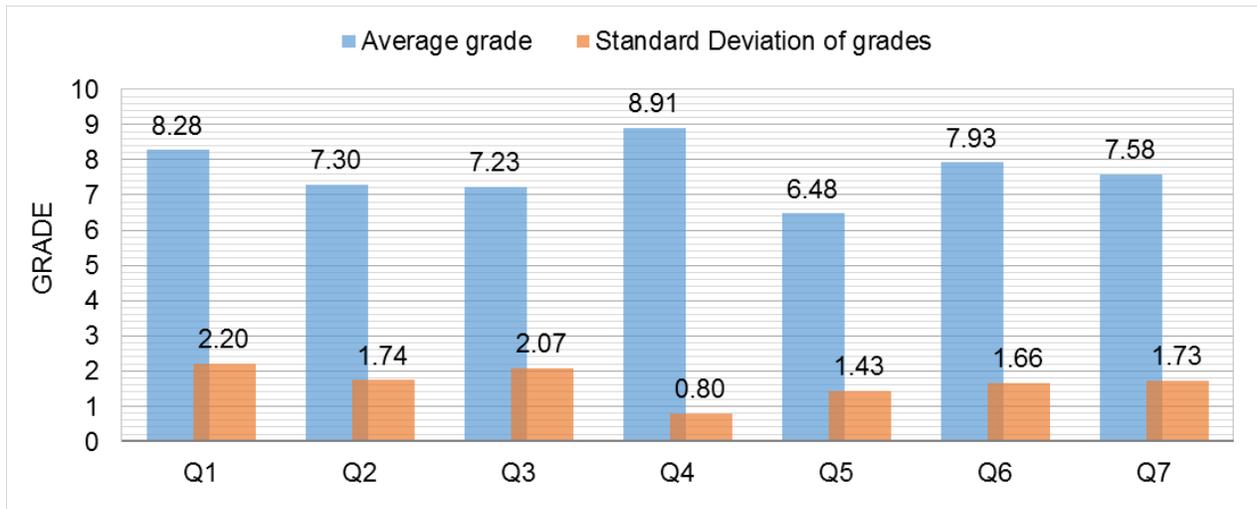

## Grade distribution

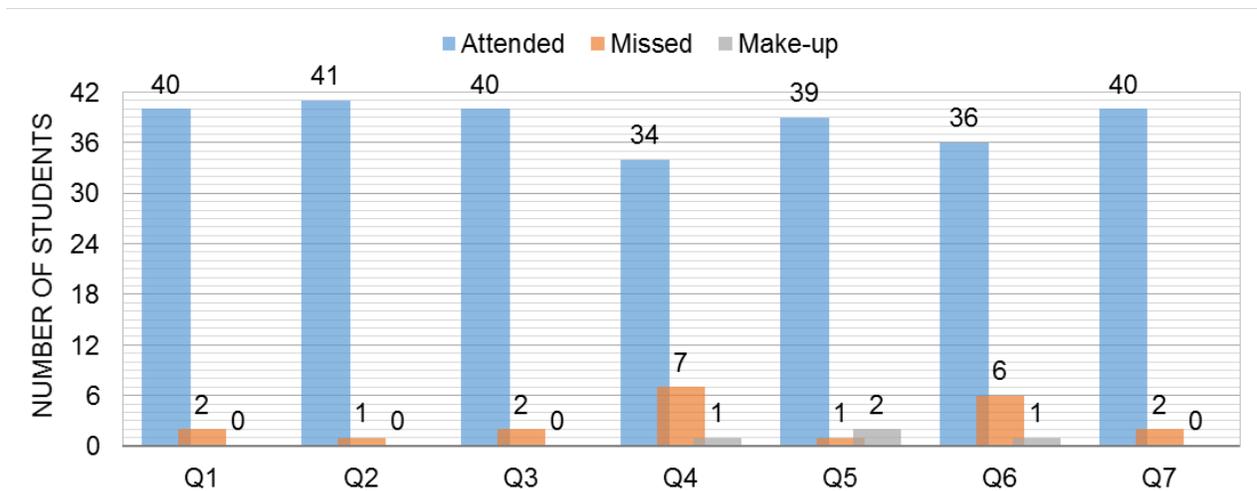

## Comparison with last five years

## Grade history

## Attendance history

## Comments

- Many students did not consider F among the total number of variables.
- Many students obtained four Pi groups instead of five since their total number of variables was seven (instead of eight).
- Some students made calculation mistakes in deriving the Pi groups.
- Few student did not approach the problem correctly and were not able to derive *non-dimensional* Pi groups.
